Beetham, H. & Sharpe, R. (2020) Rethinking pedagogy for a digital age  
Given the goals of this curricular unit we adopted a diverse set of teaching methods, including: lecturing, debate, critical analysis of readings, reflections based on real planning and assessment training programs, simulations, role-playing, and both individual and group work to engage the students with the contents and competencies of the course. Beyond Classroom activities, students will be asked to engage in weekly online assignments related to the course. To emphasize the course practical nature, students will be faced with the discussion and resolution of issues related to the process of online learning design.

The proposed assessment takes a strongly continuous and formative stance and includes:

- Weekly online assignments – 50%
- Final Report, to be done in small groups, requiring the evaluation of an online course – 35%
- Final individual reflection – 15%

Approval implies that the student obtains at least 10 out 20, both in the individual assessment and in the group assessment components.

Students unable to attend classes regularly may opt for the alternative assessment method where all tasks should be completed individually.
The proposed alternative assessment includes:

- Weekly online assignments – 50%
- Final Report, requiring the evaluation of an online course – 35%
- Final individual reflection – 15%.

The Alternative Assessment System is exclusive to students with the status of student-worker, top-level athlete and others provided for in the regulations. In these cases, passing the course implies compulsory attendance at the times set for assessment.

All requests for the alternative assessment option must be presented to the instructor before the end of March.
